	Clark F. Dex	ter	3724	
All participants (applicant, applicant's representative, PTO personnel):				
(1) Mr. Russell Warnock	(3)	*-	· · · · · · ·	
(2) Mr. Clark Dexter	(4)			
Date of Interview Feb 4, 2004	_			
Type: a) ☐ Telephonic b) ☐ Video Conference c) ☒ Personal [copy is given to 1) ☐ applicant 2) ☒ applicant's representative]				
Exhibit shown or demonstration conducted: d) X Yes e) No. If yes, brief description:  Mr. Warnock presented a computer animation of the present invention (the Figure 2 embodiment) in operation.				
Claim(s) discussed: proposed new claim 35				
Identification of prior art discussed: Wingen, pn 4,434,695				
Agreement with respect to the claims f)☐ was reached	. g)X was not rea	ched. h)	N/A.	
Substance of Interview including description of the general any other comments:	I nature of what was	agreed to if a	n agreement v	was reached, or
Applicant presented a proposed new claim 35 (attached in file) to more clearly distinguish the claimed invention over the				
prior art, specifically Wingen. Upon brief review, Mr. Dexter stated that it appears to define over Wingen, but that further				
consideration is necessary. Applicant will submit this new claim as soon as possible.				
		·		
(A fuller description, if necessary, and a copy of the amen allowable, if available, must be attached. Also, where no available, a summary thereof must be attached.)				
i) It is not necessary for applicant to provide a sepa	rate record of the su	bstance of the	interview (if	box is checked).
Unless the paragraph above has been checked, THE FORM INCLUDE THE SUBSTANCE OF THE INTERVIEW. (See MF already been filed, APPLICANT IS GIVEN ONE MONTH FROM SUBSTANCE OF THE INTERVIEW. See Summary of Recommendations of the summary o	PEP section 713.04). OM THIS INTERVIEW	If a reply to to DATE TO FIL	the last Office LE A STATEM	action has ENT OF THE

CLARK F. DEXTER PRIMARY EXAMINER ART UNIT 3724 22. In combination, a circular blade and a blade holder for cutting machines, comprising:

a blade head secured to a lowering device and comprising a blade head housing
having a chamber;

said blade head having a blade holding member;

a circular blade retained in said blade holding member;

an advancing device mounted in said blade head housing;

said advancing device comprising an advancing piston rod and an advancing piston actuating said advancing piston rod;

said advancing piston rod acting on said blade member for moving the circular blade from a ready position into a cutting position, thereby overcoming the force of a biasing component acting on said advancing piston rod to press said advancing piston rod in the ready position of the circular blade;

said advancing piston actuated by a first pneumatic drive and mounted and guided in said chamber;

said biasing component including a return spring and being mounted within said chamber, said biasing component having one end supported against said advancing piston and another end supported against a support structure within said chamber at an axial spacing from said advancing piston with the axial spacing between said advancing piston and said support structure within said chamber being such that said biasing component is in a ready position when said compression

one end of said biasing component is supported against said advancing piston and said another end of said biasing component is supported against said support structure within said chamber; and

10

a pressing device for increasing the compression of said biasing component beyond said ready position compression of said biasing component by loading said biasing component toward said support structure within said chamber while said axial spacing between said advancing piston and said support structure within said chamber remains constant, whereupon said one end of said biasing component previously supported against said advancing piston is decoupled from and is no longer supported against said advancing piston.
